Easy and Safe Encryption of Emails

Every day we exchange sensitive project-related, personal and financial data with other people or companies. Electronic mails are so convenient, quick and cost-effective that we generally do not very much care how they really are delivered.

However, from a technical perspective, emails are nothing more than virtual postcards that can be intercepted, read or even manipulated by anybody while in transit.

For this reason, from now on sign or encrypt your emails and attachments using our clever encryption system. By doing so, you can protect your data completely from any unauthorized access by third parties.

Benefits of Using gpg4o®:

- > Maximum data security for your Microsoft Outlook: Real end-to-end encryption.
- > Maximum user convenience: Quick installation and easy to operate.
- > Low administrative and maintenance expenses. Seamless integration with your corporate IT.
- > Security always up to date – with the gpg4o®-Product maintenance.

System Requirements:

- > Microsoft Outlook 2010 and 2013 (32/64 Bit)
- > Mail account types: Microsoft Exchange, IMAP4, POP3, Exchange Active Sync
- > Operating systems: Windows 7, Windows 8.x, Windows 10 (32/64 Bit)

Free trial version: www.gpg4o

Performance Characteristics:

Encryption Made Easy

- > Easy signing and encryption of E-mails
- > Signing as well as encryption and decryption of attachments
- > Sending rules can be configured individually
*(e.g. "Always encrypt to...")

Based on OpenPGP-Standard

- > Compatible with many other encryption programs such as Symantec Encryption (previously PGP), Enigmail, KMail and Apple Mail
- > Supports international character sets

Clearly Structured Key Management

- > Exchange keys with local and public key servers
- > Web of Trust – Verify the trustworthiness of foreign keys based on the information stored about the key owners

Enterprise Features*:

Features for Administrators

- > Support for Terminal servers
- > All features of the product can be configured by group policies via Microsoft Policy Manager
- > Can be integrated into software distribution systems, silent installation is possible
- > Automated generation of key pairs
- > Centralized key management (Keyserver required)

Support for Workgroups

- > Support for role models
- > Supports the Outlook assistant function
- > Groupware-solutions: Compatibel with Zarafa, Kerio Connect, Microsoft Exchange

* Features in the version "Home & Student" not included
